

# NUTLINK

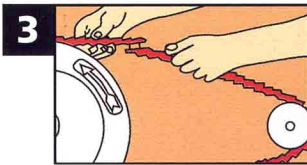

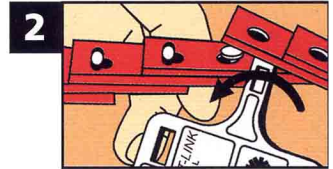

## **Fitting Instructions (refer to diagrams)**

**Read the following before Installing. Fitting tool contained inside. Always check the alignment and condition of pulleys carefully. Always store the belt in clean and dry conditions.**

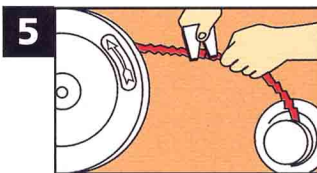

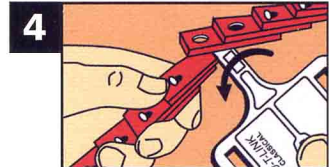

**1) To unfasten turn stud heads 90°**

**2) Insert tool and twist (to fasten, snap last link over stud heads and turn heads 90°).**

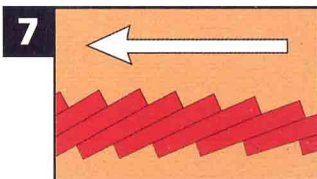

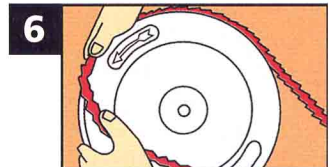

**3) Position belt around pulleys to obtain required length.**

**4) Count the total number of links and remove 9 or one in eleven links to obtain the necessary pre-tension.**

**5) Make belt endless, around pulley shafts if necessary.**

**6) Mount belt on to small pulley and spring on to large pulley by turning the large pulley slowly.**

**7) The belt will run equally well in either direction but preferably with tails leading as illustrated. On multi-belt drives ensure that each belt has the same number of links and that each belt runs in the same direction.**
